

documentation:

Machine Learning Intern – Job Description

- Collected, cleaned, and preprocessed datasets for machine learning models.
- Developed and trained machine learning models using Python and libraries such as NumPy, Pandas, and Scikit-learn.
- Performed feature engineering and data analysis to improve model performance.
- Evaluated models using metrics like accuracy, precision, recall, and F1-score.
- Visualized data and model results using Matplotlib and Seaborn.
- Optimized models through hyperparameter tuning and cross-validation.
- Documented experiments, findings, and model performance.
- Collaborated with team members to build and deploy machine learning solutions.

Skills Used:

- Python
- NumPy
- Pandas
- Scikit-learn
- Matplotlib
- Seaborn
- Jupyter Notebook
- Git & GitHub
